

A computer is a programmable electronic device that accepts raw data as input and processes it with a set of instructions (a program) to produce the result as output. It renders output just after performing mathematical and logical operations and can save the output for future use. It can process numerical as well as non-numerical calculations. A computer is designed to execute applications and provides a variety of solutions through integrated hardware and software components. It works with the help of programs and represents the decimal numbers through a string of binary digits. It also has a memory that stores the data, programs, and result of processing.

Dr. R. Jayaprakash

Fundamentals of Computer

Basic Level

Dr. R. Jayaprakash has done his Ph.D in Computer Science from Bharathiar University in 2021. He did his M.Phil in 2017 and MCA from Anna University. He is currently working as an Assistant Professor in Nallamuthu Gounder Mahalingam College, Pollachi.
